

# DS4 Halo prefill

DeepSeek V4 Flash 0731 · Strix Halo, 128 GB · Recorded September / October campaigns

Official DS4 reference: 295.27 token/s, 2K→4K interval. Different protocol; no inferred speedup.

## Historical incremental prefill · context starts at 2K

Each interval adds 2,048 tokens; two observations per frontier. Pre-indexer Halo checkpoint.

# 454.59 token/s

## Latest complete prepared 4K request · October 6 · IOMMU off

Samples 454.52 / 454.65 · 3 pure warmups + 1 measured request per independent process

106 GiB shared GPU ceiling · Generation disabled · Loading excluded

Bitwise-identical complete FP32 logits, states and token IDs in verified cases.

## Historical complete first-use prompts · 2K chunks + indexer

Required first-use preparation included; loading excluded. Historical context matrix was not rerun for rc.2.

No line connects different protocols or campaigns. Original records are retained. K = 1,024 tokens.
